

Assignment 3 of ICTS

Salman Ahmad

04072113050

BSCS 9th Semester

Quaid-i-Azam University Islamabad

Submitted to Dr. Shoaib Karim

Rite of Passage Identification:

- **Chosen Rite:** Getting a driver's license in Pakistan
- **Significance:** Transition to independence, adult responsibility, social status
- **Anticipatory Socialization:** Learning traffic rules, safety principles, exam preparation

Description:

Getting a driver's licence in Pakistan is a significant rite of passage, especially for young adults. It marks a transition to personal independence and responsibility. This milestone is often associated with maturity, trust, and new social roles.

Anticipatory Socialization Using ICT:

Information and Communication Technology (ICT) plays a crucial role in preparing individuals for this rite of passage in the following ways:

1. Online Learning Resources:

Websites (such as <https://dla.nhmp.gov.pk>), YouTube channels, and mobile apps offer tutorials on traffic rules, driving techniques, and safety measures.

Candidates can study the theoretical parts of the driving test (e.g., road signs, laws) online before attempting the written test.

2. Practice Tests and Simulations:

Several platforms provide mock theory tests based on the Pakistan licensing authority's format.

Such as <https://dla.nhmp.gov.pk/SA.aspx>, <https://ctplahore.gop.pk/practice-test>

Driving simulators or interactive apps help users practice driving in virtual environments.

3. Online Application Process:

Applicants can now register for learner's permits through online government portals like the Driving License Issuance Management System (DLIMS) in Punjab.

These systems reduce the need for physical visits and help users prepare documents and understand procedures in advance.

4. **Social Media and Forums:**

Facebook groups, WhatsApp communities, and online forums allow individuals to ask questions, share experiences, and get tips from those who have already been through the process.

5. **SMS and Email Alerts:**

Once registered, candidates receive automated reminders and updates about test dates, appointment times, and required documents.

The Chosen web System to improve:

Through comprehensive examination of the official Pakistani driving license preparation system at <https://dla.nhmp.gov.pk/SA.aspx>, multiple critical deficiencies were identified that hindered effective anticipatory socialization for driving license candidates.

Project Access:

- **Live Application:** <https://salmanrajpuat.github.io/drivinglicencetest/>
- **GitHub Repository:** <https://github.com/SalmanRajpuat/drivinglicencetest>
- **Complete Documentation:** Comprehensive guides and technical documentation included

Personal Experience and Motivation

Background Context: When I needed to prepare for my driving license test, I sought to experience how the actual examination environment would feel. However, the existing system failed to provide this crucial realistic preparation experience due to several significant limitations that motivated me to create an improved solution.

Critical Problems Identified

Real-World Testing Experience Gaps

Key Problems

- **No Time Pressure Simulation:** The original system completely lacked any timing mechanism, failing to replicate actual test conditions where candidates face strict 15-minute time constraints.
- **Unprofessional Appearance:** Severely outdated visual design undermining user confidence and government credibility
- **Static Interface:** Complete lack of interactive elements, visual feedback, or engaging user interface components
- **Disorganized Layout:** Inconsistent information architecture confusing users and hampering efficient navigation
- **Minimal Study Resources:** Extremely limited preparation materials failing to cover comprehensive driving knowledge requirements for Pakistani traffic laws

4.2 Key Improvements Implemented

- **15-Minute Timer Implementation:** Added realistic countdown timer matching actual examination conditions
- **Automatic Submission:** System automatically submits quiz when time expires, exactly like real examinations
- **Progress Tracking:** Visual indicators showing current question number and overall completion percentage
- **Navigation Controls:** Professional previous/next buttons with keyboard shortcuts for efficient navigation
- **Question Management:** Smooth transitions between questions maintaining focus and reducing distractions
- **Study Resources:** added study resources so user can prepare for test if he's scoring bad.

User Experience Transformation:

- **From Frustrating to Engaging:** Converted a blocked, unusable system into an interactive, enjoyable learning platform
- **From Unrealistic to Authentic:** Added time pressure and examination simulation creating genuine test preparation
- **From Confusing to Intuitive:** Implemented clear navigation and logical information architecture
- **From Inaccessible to Universal:** Created responsive design working across all devices and browsers

This transformation represents a complete reimagining of how ICT can effectively support anticipatory socialization for driving license acquisition, creating a tool that genuinely prepares candidates for success while addressing all identified shortcomings of the original system.

Conclusion:

Pakistan is doing great for teaching driving rules to the new students but there is always room for improvement, and it should always try to improve the way they are going.
